# Introduction to Computer Science and Programming

**PC Usage Laboratory**

Laboratory 1, October 07, 2025

**Filippo Ricca**

**DIBRIS, University of Genova**

# Today…

- Today's lab is dedicated to completing a questionnaire and performing simple tasks on the computer

1. Computer Skills Questionnaire
   - Useful for understanding your level and adjusting future lessons accordingly
2. File System Exercise: Creating Folders/Directories, Navigating, and Performing File Operations
3. Complete System and Software Knowledge Exercise
   - E.g., installation, system updates and search and kill a process
4. Complete CLI Exercise: File and Directory Management
   - CLI = Command Line Interface
5. Exercise: Solve a Challenging Equation

**You need to do it on your own (by finding information online or asking to collegues or asking to chatGPT) without my help!**

# Computer Skills Questionnaire

- By opening the course page on AW, in the Laboratory 1 section you will find the questionnaire
  - Copy https://2025.aulaweb.unige.it/mod/feedback/view.php?id=55181 in a Browser
  - Insert Login and password
  - Click on Computer Skills Questionnaire
- The questionnaire consists of simple questions to which you should answer honestly
  - E.g.,

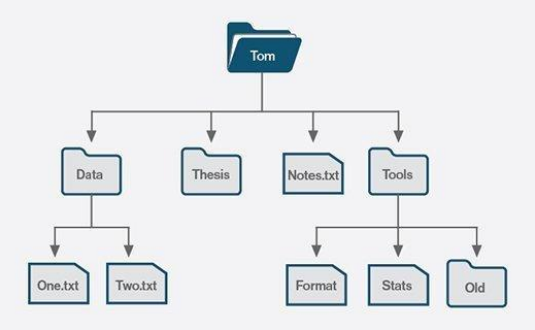
Have you ever navigated through the file system on your computer?

- Yes
- No

**Opens:** Tuesday, 7 October 2025, 2:00 PM

**Closes:** Tuesday, 14 October 2025, 11:55 PM

# File System Exercise (Exercise 1)

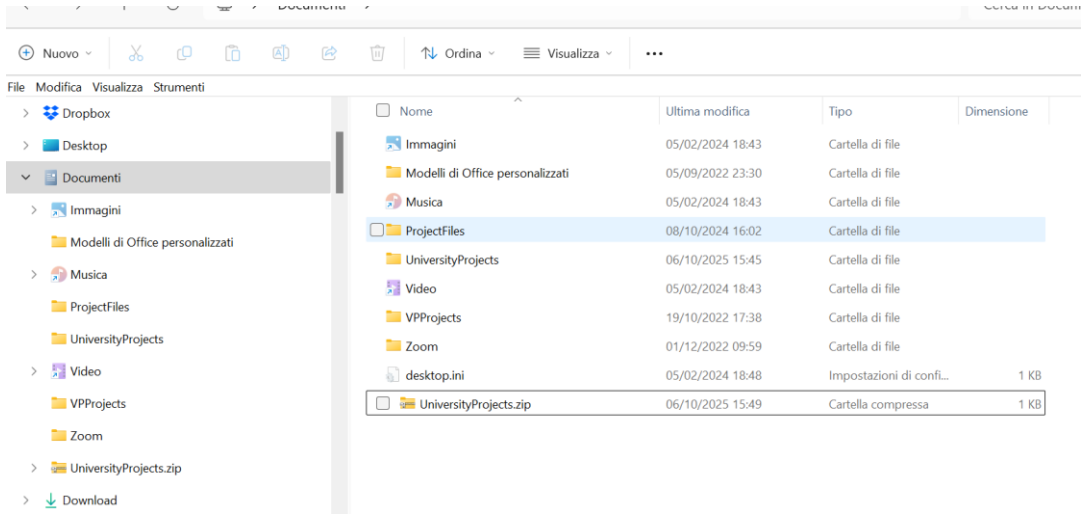


- Follow the instructions to create a Folder, insert a file, change the name of the file and finally compress the Folder in a .zip file

**Submission:**

- Take a screenshot of the zipped Folder containing the file you renamed in the Downloads folder
- Deliver the screenshot on AulaWeb

For example



# System and Software Knowledge Exercise (Exercise 2)

- You have to realize three tasks:
- **Task 1**: Checking System Information
  - In particular, **Operating System**, **CPU**, and **Memory**
- **Task 2**: Software Installation
  - Download and install a **text editor** of your choice. Examples include:
    - **Sublime Text**
- **Task 3**: Update System Software
  - Make sure your system is up to date by checking for and installing any available updates

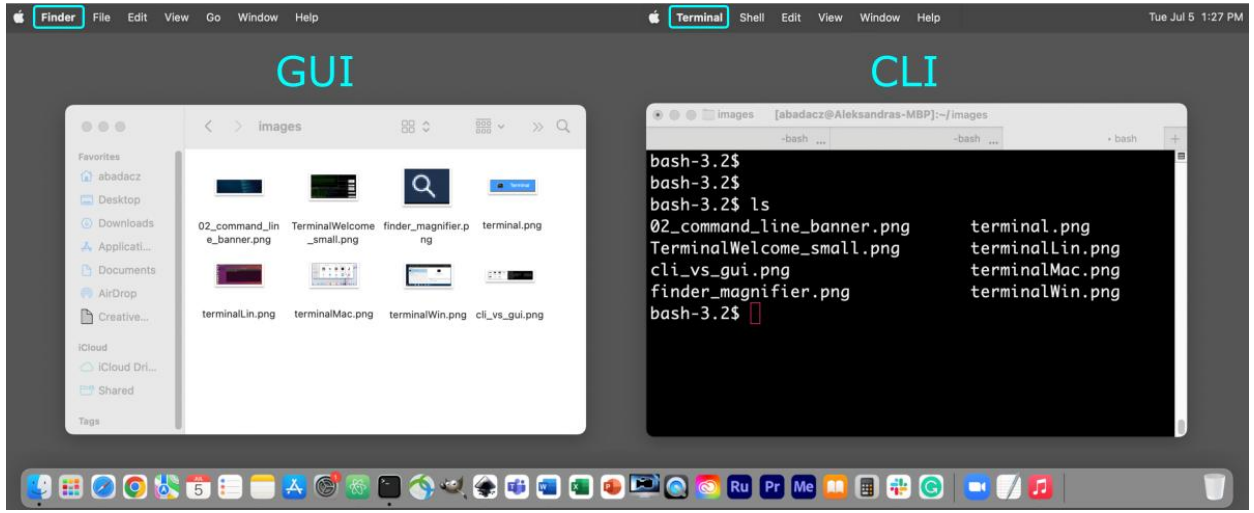
Submit all the following as part of this assignment:

1. **Screenshot** of your system's specifications
2. **Screenshot** of the installed text editor running on your system
3. **Screenshot** of the system update check

# CLI Exercise: File and Dir Management (Exercise 3)

- Follow the instructions to gain practical experience with file system management through CLI commands
  - E.g., Create folders, create files, Move directories

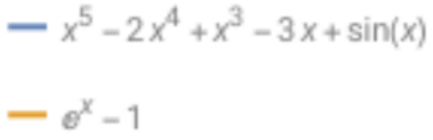
- Submit the screenshot of **ProjectFiles.zip** file you created on the Desktop as your assignment



# Complex non-linear equation resolution (Exercise 4)

- You are tasked with solving the following equation:

$$x^5 - 2x^4 + x^3 - 3x + \sin(x) = e^x - 1$$

- Use any tools or techniques you are familiar with to solve the equation. The solution might require advanced computation, as it involves both high-degree polynomials and transcendental functions like for example sin(x)


- **Submit the Screenshot:**
  - Once you have solved the equation, submit a **screenshot** showing the final results from the tool you used
